(v)

The applicant claims priority as set out on the accompanying form P 2.

(vi)

This application is for a patent of addition to Patent Application No.

(vii)

This application is a fresh application in terms of section 37 and based on Application No.

(viii)

This application is accompanied by:

1. A single copy of a provisional or two copies of a complete specification of.....pages.
2. Drawings of.....sheets.
3. Publication particulars and abstract (form P 8 in duplicate).
4. A copy of Figure.....of drawings (if any) for the abstract.
5. An assignment of invention.
6. Certified priority document(s) (state number).
7. Translation of the priority document(s).
8. An assignment of priority rights.
9. A copy of the form P 2 and the specification of S.A. Patent Application No.
10. A declaration and Power of Attorney on form P 3.
11. Request for ante-dating on form P 4.
12. Request for classification on form P 9.

54 A DEVICE TO ALTER THE DIRECTIONAL MOVEMENT OF AN AUTOMATIC POOL CLEANER

* I/we George Victor Rissik
hereby declare that :-

- * 1. I/we am/are the applicant(s) mentioned above;
- ** 2. I/we have been authorized by the applicant(s) to make this declaration and have knowledge of the facts herein stated in the capacity of _____ of the applicant(s);
- *** 3. the inventor(s) of the abovementioned invention is/are the person(s) named above and the applicant(s) has/have acquired the right to apply by virtue of an assignment from the inventor(s);
4. to the best of my/our knowledge and belief, if a patent is granted on the application, there will be no lawful ground for the revocation of the patent;
- **** 5. this is a convention application and the earliest application from which priority is claimed as set out above is the first application in a convention country in respect of the invention claimed in any of the claims; and
6. the partners and qualified staff of the firm of _____, patent attorneys, are authorised, jointly and severally, with powers of substitution and revocation, to represent the applicant(s) in this application and to be the address for service of the applicant(s) while the application is pending and after a patent has been granted on the application.

Title of invention

54

A DEVICE TO ALTER THE DIRECTIONAL MOVEMENT OF AN AUTOMATIC BOOK CARRIER

ANGLED DOUBLE SWIVEL FOR AUTOMATIC CLEANING DEVICES FOR CLEANING
SWIMMING POOL SURFACES

FIELD OF THE INVENTION

This invention relates to a device used with automatic cleaning devices used for cleaning submerged surfaces of, for example, swimming pools for changing the direction of the unit while in motion so as to enhance the automatic cleaning devices efficiently.

BACKGROUND TO THE INVENTION

The automatic cleaning devices are generally attached by flexible hosing to the inlet of the pool filtration system and have an associated problem in Above-Ground Pools and Square Bottom In-ground Pools, in particular of either sticking in the corner or only cleaning the edges of the floor where it meets the wall, because of the wall to floor configuration being 90° or thereabouts. A problem with devices presently available is that they would appear to only change the direction of the unit once the pump is switched off which is insufficient to greatly alter the direction of the automatic cleaning device and therefore its cleaning efficiency.

OBJECT OF THE INVENTION

It is an object of this invention to provide a device which would change the direction of the automatic cleaning apparatus while it is in motion so that the unit cleans substantially more of the floor surface than is now cleaned.

SUMMARY OF THE INVENTION

In accordance with this invention there is provided a tubular body set at an angle which has an inlet and an outlet and a flow passage there between and on each of these inlet and outlets is provided a swivel connection. The inlet swivel connection would be coupled to the automatic cleaning apparatus and the outlet swivel connection coupled to the flexible hose which would be attached to the inlet to the pump mechanism. As the swivel on the inlet and outlet rotate through 360° with respect to the angled tubular body the automatic cleaning apparatus will move at an ever-changing angle to the flexible hose and thus achieve a complete random pattern.

BRIEF DESCRIPTION OF THE DRAWINGS

One embodiment of the invention will be described, by way of example only, with reference to the drawings in which:

Fig. 1 shows a sectioned side elevation of the entire device.

Fig. 2 shows an exploded view of the device as in Fig. 1.

DETAILED DESCRIPTION OF THE DRAWINGS

The device is shown in Figure 1 which has a tubular body 1 angled, on to which at each end is attached a circular hollow member 2 which fits over the ends of the tubular body and is able to swivel or rotate through 360°.

These circular hollow members 2 are retained in position by a notch fitting 3 on the circular hollow member which fits a similar sized concave area 4 on the tubular body 1. Once fitted together, an angled double swivel arrangement is provided with a common inlet 5 and a common outlet 6.

Reference is now made to Figure 2 of the drawings in which the same reference numerals used above are used to designate similar parts. The swivel couplings 2 comprise a sleeve portion which is cylindrical in shape with a circumferential inwardly extending rib 3 in the inner surface of the sleeve portion 2 and is securable within a complimentary shaped circumferential notch 4 in the outer surface of the tubular body 1.

These circular hollow members 2 are retained in position by a notch fitting 3 on the circular hollow member which fits a similar sized concave area 4 on the tubular body 1. Once fitted together, an angled double swivel arrangement is provided with a common inlet 5 and a common outlet 6.

Reference is now made to Figure 2 of the drawings in which the same reference numerals used above are used to designate similar parts. The swivel couplings 2 comprise a sleeve portion which is cylindrical in shape with a circumferential inwardly extending rib 3 in the inner surface of the sleeve portion 2 and is securable within a complimentary shaped circumferential ^{notch} 4 in the outer surface of the tubular body 1.
